

Frozen P50 TABLE workflow: 204 / 332 complete; necessary broad robustness remains blocked

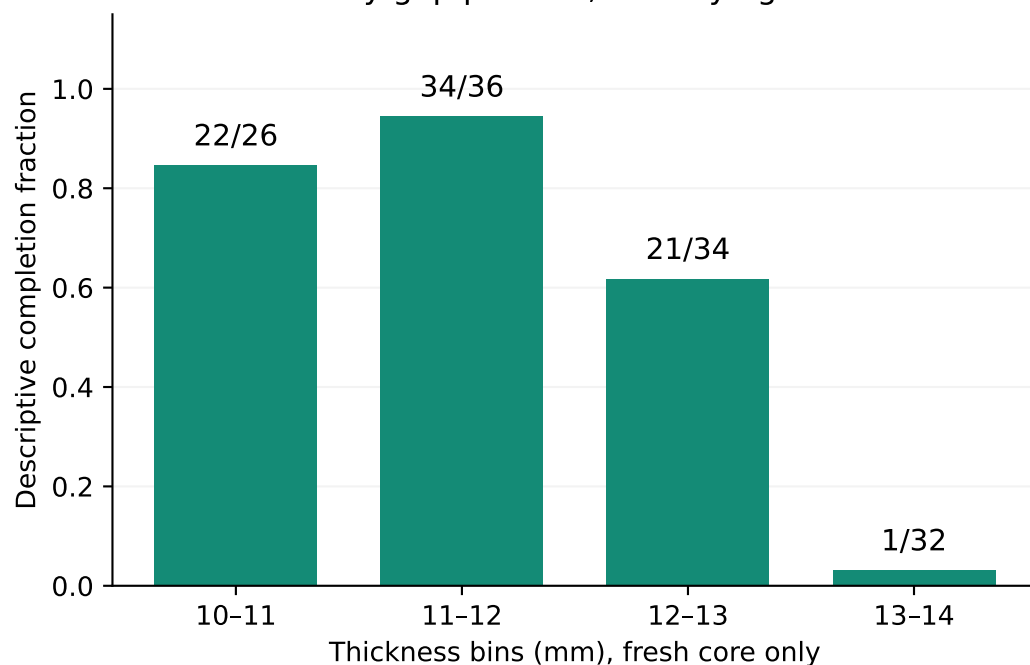

A All332 predeclared outcomes

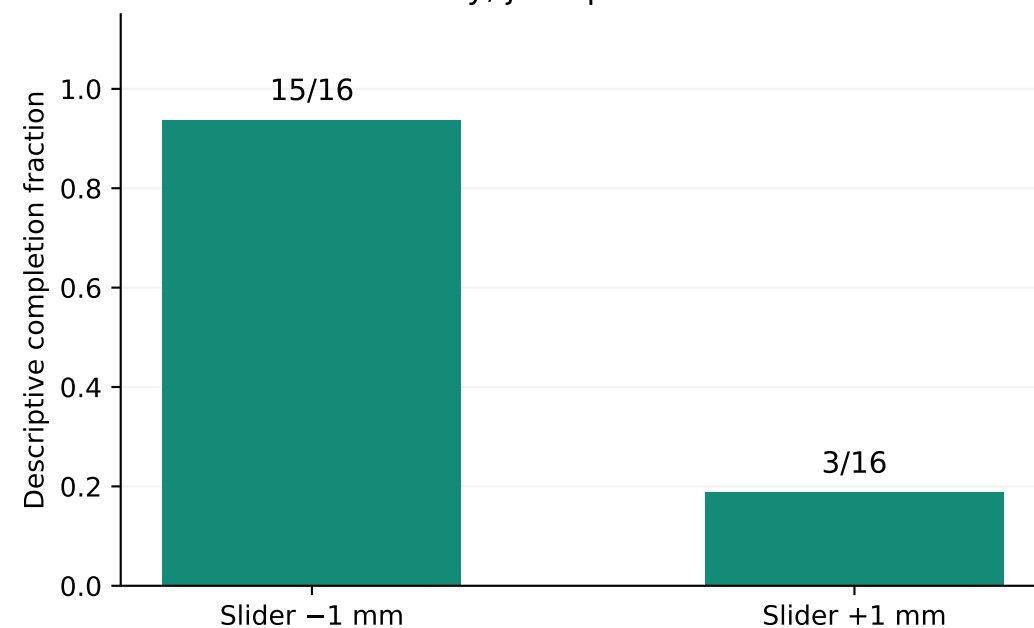

B 128 fresh geometries, one core episode each

C Geometry gap persists; co-varying dimensions

D Nominal body, joint perturbations retained

Actual uninterrupted simulation; same nominal policy/controller throughout, all cases retained. Failure labels are priority categories, not chronological onsets. Nearby engineering geometry/load/contact ranges only; repeated seeds are not new objects. No isolated thickness causality or real-robot reliability claim.
